AVERO Comfort

The perfect bathing and nursing solution

AVERO Comfort lifting bath

Modern design for your new nursing bathroom ...

BEKA Hospitec design and manufacture high quality products for hospital bathrooms which enable your patients to have an enjoyable and relaxing bathing experience whilst also providing the ideal working conditions for your nursing staff ...

Classic, elegant design with domestic appeal

During the design process for our new AVERO Comfort nursing bath, we have been challenged to meet the increased form and function demands. In order for a nursing bathing solution to fulfill these demands it should incorporate a modern tub, which is still classic, elegant and timeless. It should also fit unobtrusively into your new bathroom whilst also giving your residents, staff and visitors a domestic feeling. Domestic appearance and high functionality are combined in the use of Hans-Grohe thermostatic mixer taps. The AVERO Comfort does not need to be fixed to the floor and the bath maintains stability and can be adjusted accordingly to accommodate various floor and room conditions.

Suitable for all nursing hoists and lifts

The AVERO Comfort is supremely functional and can be use with all modern hoists and lifts on the market, irrespective of the manufacturer. The large and comfortable interior space allows the resident to stretch out and enjoy a comfortable bathe with or without use of a hoist or lift.

Choice of bathing position

Enables the resident to view the room from different positions ...

The unique AVERO Comfort nursing tub is suitable for small rooms with limited space. It can give the option of moving the tub to allow the resident a refreshing change of view ...

Offers the resident a choice of view into the room

The AVERO Comfort has a large internal space and attractive outside paneling and as such is appealing from all angles. This unique feature also allows you to rotate the bath around and locate it in a position where the resident can have an unobstructed view of the room, without spoiling the elegant appearance and aesthetics of the bath or room.

Also suitable for small rooms

The AVERO Comfort height adjustable bath has additional space underneath the tub which means that even in small rooms where space is limited, hoists and lifts can still be used. The special shape of the tub with distinctive arm rests also gives a balanced interior shape allowing the bather to relax and stretch.

Premium grab bars for optimum security

Premium, chrome brass grab handles which are located in a specifically designed recess, give the bath not only a distinctive look, but also an excellent holding point for the resident.

Automatic water filling stop

By taking advantage of the automatic water stop option, when filling the bath you will be able to attend to the resident without the worry of water overflow and the filling height can be preset to a level of your choice depending upon the water volume required for your resident. This will help to save time and energy costs and allows the full attention on the resident during bathing.

The classic, elegant and timeless bath will complement your bathroom beautifully and creates the impression of a domestic surrounding.

Ergonomically sculptured tub body with arm rest recess and grab handles for added comfort and safety.

The AVERO Comfort nursing bath has various options, which assist in providing an excellent relaxing bath for your residents ...

Air spa system

An integrated air spa system offers your resident a relaxing and stimulating bath due to the massaging effect created. In addition, there is no risk of any cross contamination from the jets as a result of an internal disinfection system.

Aromatherapy system

An integrated aromatherapy system, which when used in conjunction with the warm air spa, releases your chosen scent which can help to stimulate the senses. This is easy to operate and is completely maintenance free. (The Aromatherapy system can only be used in conjunction with the air spa system).

Coloured light therapy system

Two LED lights built into either side of the bath tub give a relaxing and therapeutic bathing experience with the option of selecting any colour manually or by an automatic light program.

Music sound system

Two premium integrated speakers in the tub transform the chosen music into water vibrations which create a unique state of the art sound experience for the resident. Music is played using a USB-connection port which means that each bather can have their chosen music played and changed on a regular basis. In turn, a water resistant hand held remote control enables easy operation

The air spa system stimulates the senses with a massaging effect on the skin which assists relaxation.

The integrated, maintenance-free aromatherapy system allows use of various scents when used in conjunction with the air spa system.

The ideal bathing solution

For your staff and residents ...

The AVERO Comfort height adjustable bath combines well being and care perfectly with greatest safety and comfort ...

Key benefits for your nursing staff
